NEIGHBORHOOD NOTICE:
ALLEY PAVEMENT PROJECT UPDATE

Dear Neighbors,

I am absolutely thrilled to share a major milestone for our community: our alleys are finally getting a comprehensive overhaul! For those who remember when our town's major sewer infrastructure project was completed in the **early 1990s**, you know it has been several decades since the alleyways have seen a complete municipal repaving. In fact, for many sections, it has been **over 50 years (since the early 1970s)** since the pavement was last fully standardized from edge to edge.

Because this is a long-overdue, generational upgrade, **we are intentionally not rushing the project** to ensure the highest quality, longest-lasting finish possible. While the project was a bit delayed due to **necessary core sampling, required tree and brush trimmings, and unpredictable weather**, these steps were essential to properly prepare the foundation. To guarantee the best results, the final base coat is scheduled to be completed in **Spring 2027**.

To prepare the alleys for the upcoming winter season, the project will proceed as follows:

Feature	Construction Detail
Current Pavement Base	A solid 4-inch base has been laid down for the winter.
Temporary Edges	This base leaves an approximate 1.5-inch edge (lip) along driveways, manholes, and storm sewers.
Access Ramps	Temporary ramps will be installed over these edges to ensure you can smoothly drive in and out of your driveway.
Winter Maintenance	These ramps will also allow local snowplows to safely clear the alleys without damaging the new pavement or winter equipment.

Thank you all for your patience and cooperation as we take the time to do this project right. It is exciting to see this piece of Montoursville infrastructure finally modernized for the generations to come!
